

Other Features

- [Babysitting](#)
- [CBK Stats](#)
- [Mail System](#)
- [Undecided Features](#)
- [Wallet Nicknames](#)

Babysitting

Players can let other players babysit their villages, whether on vacation or to have help managing them. If the player has a market when the babysitter is babysitting, they can sell resources on the market on the owners behalf. This would net them a small cut of the final KING value, which will go directly to each players wallet.

This feature is still tentative.

CBK Stats

Players can view global stats on a tool called "CBK Stats" (modeled after [twstats](#)). This site will include:

- game update news
- global statistics (number of players, number of villages, number of guilds, number of attacks made)
- search for player / guild by name
- world stats (player ranks, guild ranks, village ranks, total numbers of troops, a world map view, a distance calculator, a village locator)

This feature may or may not be ready at launch.

Mail System

Cryptoblades Kingdoms mail system will allow players to communicate with each other via an off-chain solution. Players will use either player nicknames or wallet addresses to identify and communicate privately with one another, to communicate, plan and strategise their way to victory. We will offer a variety of mail functionalities one might expect from a mail application including but not limited to; sending mail, receive mail, battle reports, mass mail announcements, forwarding and replying.

Undecided Features

- Should generals be used in normal combat? If so, to what extent? Should they only buff their element? (Providing a numerical buff is very p2w)
- Should players be able to commit up to 50 CryptoBlades weapons for an expedition for their army to get a power boost for dungeons?

Wallet Nicknames

Players will be assigned a randomly generated nickname on village signup to help identify them in Cryptoblades Kingdoms. Players will be able to change their name as they see fit but will be required to be unique and follow a short list of constraints. A players first name change will be free, subsequent name changes will cost x amount of "Gold".
